Powerful Search and Discovery Features

Searching on SpringerImages is easy. Users can browse images by subject, source, image type and date, using either the quick search, or the advanced search options which provide additional specifications.

SpringerImages offers the option of searching by image captions only, or searching in the full-text, including sentences from the source chapter or article referring to the image, the source's bibliographic info, and the data within tables and charts. This allows researchers to search deeply within the contextual information that will help them retrieve their most relevant results.

Image Exports – Accelerating Your Research

Researchers are free to export the images they find and use them in their personal research, to update lectures and presentations, and for other non-commercial use.

After logging in, a simple Drag & Drop is enough to create your own image sets. These can be saved for a next visit, or be exported into PowerPoint or PDF, with caption and citation information automatically included. Additionally, users can save search criteria for future use.
